Product

Product description

The Nordic Royal product is an alloy of copper with aluminium and zinc (CuAl5Zn5Sn1), giving it a rich golden through-colour and making it very stable. It has a thin protective oxide layer containing all three alloy elements when produced. The surface retains its golden colour and loses some of its sheen as the oxide layer thickens with exposure to the atmosphere to give a matt finish. It does not develop a blue or green patina.

Nordic Royal alloy is available in sheets or coils.

- Thickness range: 0.5 – 1.5 mm
- Maximum width: 1000 mm.

This declaration is valid for the product Nordic Royal.

Application

Nordic products are used for facades, roofs, roof drainage systems and other architectural elements of all shapes, as well as interior applications, decorations, ceilings, wall claddings

Relevant standards are: /EN 1172/ in combination with /EN 1976/, /EN 1652/, /EN 504/, /EN 14783/.

Technical Data

Test standards are: EN ISO 6507-1:2005; EN-ISO 6507-2:2005, EN ISO 6892-1:2009, ISO 1811-2:1988-10, ISO 4739:1985-05

Base materials / Ancillary materials

The Nordic Royal product consist of an alloy of copper with aluminium and zinc (CuAl5Zn5Sn1), according to /EN 1172/. The copper (Cu) content is 88- 92 %, the aluminium (Al) content is 4 -6 %, the zinc (Zn) content is 4-6% and tin (Sn) content is 0.3-1.6%.

The cakes for Nordic Royal sheet production are supplied from Aurubis Schwermetall, in Germany, and only undergo rolling operations at Aurubis Pori.

Additives:

- Biodegradable rolling oil and emulsion which is used for cooling and lubrication during the rolling process
- Benzotriazole which is used as anticorrosive agent.

Reference service life

Copper has a long service life and durability. The rates of copper elutriation under normal atmospheric weathering are between 0.7 g/m²*a and 1.5g/m²*a.

Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account. The used background database has to be mentioned. *For life cycle modelling of the considered products, the /GaBi ts Software/, developed by thinkstep AG, has been used. All relevant background datasets are taken from the /GaBi ts Software/ database. The datasets from the GaBi database are documented in the online documentation /GaBi ts Data/.*

System boundary

Type of the EPD: cradle-to-gate - with options. According to "System limits" outlined in section 5.5. of the PCR, Part A: "Calculation Rules for the Life Cycle Assessment and Requirements on the Background Report" the following life cycle stages are considered:

- Production, upstream raw materials & energy (Module A1-A3)
- Waste processing for reuse, recovery or recycling (Module C3)

LCA: Scenarios and additional technical information

End of life (C1 - C4)

Name	Value	Unit

Recycling	0.99	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information
